

FARES KHANCHOUCH

Software Engineer · Automation, Systems & Integration

fares.khanchouch@gmail.com · +216 22 97 42 01 · Tunis, Tunisia · linkedin.com/in/fares-khanchouch · github.com/Fares-Khanchouch

PROFESSIONAL SUMMARY

Software engineer combining DevSecOps depth, production automation, and enterprise systems integration. Currently at Axe Finance delivering complex integration and workflow automation for banking clients at enterprise scale. Designed multi-layer secure CI/CD pipelines cutting security review time by **70%**, deployed production AWS infrastructure with Terraform, and built an AI-powered automation system reducing manual work by **95%**.

PROFESSIONAL EXPERIENCE

Integration Consultant · *Axe Finance*

Dec 2025 – Present | Tunis, Tunisia

- Implement end-to-end **credit lifecycle management** solutions for banking clients, covering loan origination, scoring, workflow automation and document generation across the full credit process.
- Build and **integrate web services** to connect Axe Finance's platform with client banking systems, ensuring reliable data exchange across heterogeneous enterprise environments.
- Collaborate directly with clients through **structured delivery cycles** — requirements gathering, scoping sessions, UAT and go-live — within a cross-functional team in the Client Delivery & Support department.

Freelance Automation Engineer · *Independent*

Sep 2024 – Nov 2025 | Remote

- Designed and delivered enterprise **automation workflows** for **6+** consulting firm clients using n8n and Make — including a company intelligence system that scrapes, enriches and structures firmographic data into automated client reports fed into downstream CRM and ERP systems.
- Built **ETL pipelines** migrating **100,000+** records from Excel and legacy formats into Airtable, with validation, deduplication and transformation logic ensuring data integrity across the full migration.
- Delivered **end-to-end** across the full client cycle — scoping, build, testing, handoff and documentation — working independently on each engagement.

Cloud & DevSecOps Intern · *Nuage Up*

May 2024 – Aug 2024 | Paris, France

- **Architected and deployed** production-grade AWS infrastructure using Terraform and Lambda, provisioning **15+** cloud resources with full IaC coverage and eliminating all manual configuration steps.
- Built end-to-end **CI/CD pipelines** with GitHub Actions incorporating three security scanning layers — Trivy (container CVEs), OWASP ZAP (dynamic app testing), and Docker Bench — cutting security review time by **~70%**.
- Orchestrated multi-service **Kubernetes deployments** on EC2 with network policies and RBAC, reducing inter-service attack surface and achieving zero unplanned downtime during the internship.
- Enforced **code quality standards** across JavaScript and Go codebases using ESLint and Staticcheck, resolving **200+** pre-existing linting violations and establishing baseline quality gates for future commits.

Full-Stack Web Development Intern · *WAY2CLOUD*

May 2023 – Aug 2023 | Paris, France

- Designed and delivered a production-ready **e-commerce platform** from scratch in **3 months** using React.js, Node.js and MongoDB, handling the full stack independently.
- Implemented **user authentication**, product catalogue with inventory management, and **cart-to-checkout** flow — delivering a complete purchasing experience end-to-end.
- Automated daily incremental database backups to AWS S3 via Node.js scripts, reducing data loss risk from **24** hours to under **1 hour**.
- Improved frontend load time by **~40%** through code splitting, lazy loading and component optimisation, alongside a full unit test suite for critical user flows.

DevOps Intern · *WAY2CLOUD*

Jun 2022 – Jul 2022 | Paris, France

- Built a **Python REST API** that automated Kubernetes cluster lifecycle operations, cutting manual cluster management tasks by **80%** for the infrastructure team.
- Containerised the API with Docker and deployed via Helm charts on Kubernetes, enabling reproducible **one-command deployments** across environments.

EDUCATION

Engineering Degree — Computer Science · *ISTY Vélizy, Université de Versailles Saint-Quentin-en-Yvelines* 2021 – 2024 | Vélizy-Villacoublay

PROJECTS

AI-Powered Job Application Pipeline

2024 – Present

- Engineered a full automation system connecting **7 integrated services** end-to-end: Chrome extension (job capture) → n8n (orchestration) → OpenRouter API (LLM scoring and generation) → Puppeteer (PDF rendering) → AWS S3 (storage) → Airtable (CRM) → custom Python document renderer.
- Reduced job application prep time from ~2 hours to under **5 minutes** per application — system handles scraping, fit scoring, tailored resume generation, cover letter generation and PDF delivery fully automatically.
- **Stack:** JavaScript, Python, n8n, Docker, Cloudflare Tunnel, AWS S3, Airtable, OpenRouter API, Puppeteer.

CI/CD Pipeline Optimisation

2023

- Designed and implemented multi-stage **CI/CD pipelines** using Jenkins and GitHub Actions for a containerised Spring Boot microservices application, achieving **sub-5-minute** build cycles.
- Integrated automated linting, unit testing, Docker image building and environment-specific deployment stages — reducing manual release steps from **12 to zero**.

TECHNICAL SKILLS

Languages: Python, JavaScript, Go, Java, SQL

Infrastructure & Cloud: Docker, Kubernetes, Terraform, AWS (EC2, S3, Lambda), Ansible

CI/CD & Security: GitHub Actions, Jenkins, OWASP ZAP, Trivy, Docker Bench

Backend & APIs: Node.js, React.js, Python (Flask, Django), Spring Boot, REST APIs, GraphQL, Web Services

Databases: PostgreSQL, MySQL, MongoDB, Redis

Automation & Tooling: n8n, Make, Bash scripting, Git, Linux

Methods: Agile, Scrum, TDD, Infrastructure as Code, CI/CD

LANGUAGES

French: C1 — Professional · **English:** C1 — Professional (TOEIC 985/990) · **Arabic:** C1 — Native · **German:** A2 — Basic
